

Repairing runflat tyres

All models

Situation:

The question is regularly asked whether a repair should be performed on runflat tyres after a loss of pressure.

**Runflat tyres**

(also known as "tyres with emergency running characteristics") can be recognised by a circular symbol on the side wall bearing the letters RSC (Runflat System Component).

Note:

As a general rule, BMW has never recommended repairs on tyres. However, should individual customers wish to have their tyre repaired, their wishes may be accommodated.

A list of tyre manufacturers who approve or disapprove of repairs to runflat tyres can be found in the section headed "Procedure".

Procedure:

1. Contact the local representative of the tyre manufacturer concerned.
2. Please note the following when naming the nearest authorised tyre dealer for runflat tyres:

Tyre manufacturers who **approve** of repairs on runflat tyres (under certain conditions):

- Michelin
- Dunlop
- Goodyear
- Bridgestone

Tyre manufacturers who **disapprove** of repairs on runflat tyres:

- Pirelli
- Continental
